A Modern and Mobile Career Center Management Platform

 Expect More From Your System.

**MORE CAPABILITY**

**Advanced Reporting and Analytics**

Click and display technology quickly turns your data into visuals, enabling you to spend more time on understanding your data and less time on managing it. Custom dashboards, mobile access, and standardized reports will change the way you track and report student and employer metrics.

**MORE ENGAGEMENT**

**Targeted Content for Users**

Provide students and alumni with content specific to their job interests, major, and preferences. The modern interface uses machine learning and profile information to create a personalized experience for each user that drives higher engagement and system use.

“The implementation went more smoothly than any other software we've brought on board in my 16 years with the department. We found the whole Handshake team to be responsive, timely, dedicated and passionate. They are taking our industry to new heights!”

Sarah Kersey Otto  
*Director of Career Development and Outreach*

SOME OF OUR 70+ CAMPUS PARTNERS

- Stanford University
- Michigan State University
- University of Rochester
- Messiah College
- Wake Forest University
MORE OPPORTUNITIES

Increased Job Postings and Employer Partnerships

Because Handshake is a network and not a website, employers can more easily post jobs to your campus and engage with job seekers. Expand your recruiting partnerships and help your students and alumni become discoverable by their preferred employer.

MORE ACCESS

Comprehensive Compatibility

Handshake is the only platform built for smartphones, tablets, and computers. Now job seekers and employers can more easily connect with your office, complete tasks, and access information and resources.

MORE VALUE

A True All-in-One Solution

Handshake is a single platform with all features and functionality fully integrated. No separate modules to add, no separate contracts, and no surprises with extra fees and invoices. As a result, our partners realize substantial savings compared to most other systems.
